Detailed Revision History

Revision	Revision Date	Prepared By	Details of Change
5	August 2017	Alex Cochran Disha Bhardwaj	<ul style="list-style-type: none">- Added "Table 22 Reference and Power Filtering Pin Description" to the pin description section. Refer to the hardware design guide for components and connections required for the power filtering pins.- Internal Updated "Table 84 Normal Operating Voltages" with complete list of pins for the AVD_0V8, A-VD_1V8, and VDDO_1V8 power domains.- Added bootstrap option pins BEN, BST[1:0], CBT[2:0], MSE, MSM, MSR, NEN to "Table 3 DIGI-G5 Device Interface Pin Description".- Changed software API names to reflect development 1.0.0 release of the DIGI-G5 Device Family Software Development Kit (SDK).- Added test point receive and transmit pins to "Table 3 DIGI-G5 Device Interface Pin Description".
4	August 2017	Alex Cochran Disha Bhardwaj	<ul style="list-style-type: none">- Added "Table 22 Reference and Power Filtering Pin Description" to the pin description section. Refer to the hardware design guide for components and connections required for the power filtering pins.- Internal Updated "Table 84 Normal Operating Voltages" with complete list of pins for the AVD_0V8, A-VD_1V8, and VDDO_1V8 power domains.- Added bootstrap option pins BEN, BST[1:0], CBT[2:0], MSE, MSM, MSR, NEN to "Table 3 DIGI-G5 Device Interface Pin Description".- Changed software API names to reflect development 1.0.0 release of the DIGI-G5 Device Family Software Development Kit (SDK).- Added test point receive and transmit pins to "Table 3 DIGI-G5 Device Interface Pin Description".
3	February 2017	Alex Cochran	<ul style="list-style-type: none">- Increased number of SERDES on Bank C from 20 to 24.- Indicated lane order reversal of SERDES Bank A on Device PCB Floor Planning Diagram.- Added ODUjk mux 100G Capacity Resource tables for 600G and 500G modes of operation.- Updated text and diagrams to show support for 24x10GE.
2	January 2017	Alex Cochran	<ul style="list-style-type: none">- Removed references to PM6012 and PM6013.- Removed support for SSPRQ, JP03A and JP03B SerDes patterns to align with standards.
1	November 2016	Alex Cochran	First release.

Notice Test

The RCP (Ring Control Port) interface has two separate RCPs:

- Remote Information RCP (RI_RCP)
- Defect Information RCP (DI_RCP)

The *receive and transmit RI_RCP* carries BDI/BEI/BIAE bits from the sink framers and the APS/PCC bytes. The *DI_RCP* transmits defects and alarms. RI_RCP is standard XFI running at 10.3125 Gbps and DI_RCP is standard SGMII (Serial Gigabit Media Independent Interfaces) running at 1.25 Gbps. See [ODU Ring Control Port Block \(ODU_RCP\)](#)

SERDES P/N signals can be swapped on a per lane basis. Independent configuration for P/N swap in the Tx and Rx direction is supported.

The frame format is described in [ODU Ring Control Port Block \(ODU_RCP\)](#) for both RI_RCP and DI_RCP.

The signals use M10 family SERDES from the Multimode SERDES at 10Gbps cell set. For details, see [1](#). Note also that the M10 SERDES are synchronous to the PCIE_REFCLK reference clock.

Note that the M10 SERDES does not provide the register configurability to swap the polarity of the Transmit P/N data and Receive P/N data signals. The Tx PCS for this interface does not have the ability to change the polarity of P/N, however the Rx PCS does have the capability to swap the polarity of P/N.

Table 1 • DIGI-G5 OTN Ring Control Port Interface Pin Description

Pin Name	Type	Function
RI_RCP_RXI_P/N	Input	Remote Information Ring Control Port Slice XFI Receive M10 SERDES, XFI mode
RI_RCP_TXO_P/N	Output	Remote Information Ring Control Port Slice XFI Transmit M10 SERDES, XFI mode
DI_RCP_RXI_P/N	Input	Defect Information Ring Control Port Slice SGMII Receive M10 SERDES, SGMII mode
DI_RCP_TXO_P/N	Output	Defect Information Ring Control Port Slice SGMII Transmit M10 SERDES, SGMII mode

Preface Test

The RCP (Ring Control Port) interface has two separate RCPs:

- Remote Information RCP (RI_RCP)
- Defect Information RCP (DI_RCP)

The *receive and transmit RI_RCP* carries BDI/BEI/BIAE bits from the sink framers and the APS/PCC bytes. The *DI_DCP* transmits defects and alarms. RI_RCP is standard XFI running at 10.3125 Gbps and DI_RCP is standard SGMII (Serial Gigabit Media Independent Interfaces) running at 1.25 Gbps. See [ODU Ring Control Port Block \(ODU_RCP\)](#)

SERDES P/N signals can be swapped on a per lane basis. Independent configuration for P/N swap in the Tx and Rx direction is supported.

The frame format is described in [ODU Ring Control Port Block \(ODU_RCP\)](#) for both RI_RCP and DI_RCP.

The signals use M10 family SERDES from the Multimode SERDES at 10Gbps cell set. For details, see [1](#). Note also that the M10 SERDES are synchronous to the PCIE_REFCLK reference clock.

Note that the M10 SERDES does not provide the register configurability to swap the polarity of the Transmit P/N data and Receive P/N data signals. The Tx PCS for this interface does not have the ability to change the polarity of P/N, however the Rx PCS does have the capability to swap the polarity of P/N.

Table 2 • DIGI-G5 OTN Ring Control Port Interface Pin Description

Pin Name	Type	Function
RI_RCP_RXI_P/N	Input	Remote Information Ring Control Port Slice XFI Receive M10 SERDES, XFI mode
RI_RCP_TXO_P/N	Output	Remote Information Ring Control Port Slice XFI Transmit M10 SERDES, XFI mode
DI_RCP_RXI_P/N	Input	Defect Information Ring Control Port Slice SGMII Receive M10 SERDES, SGMII mode
DI_RCP_TXO_P/N	Output	Defect Information Ring Control Port Slice SGMII Transmit M10 SERDES, SGMII mode

Preface Test

The RCP (Ring Control Port) interface has two separate RCPs:

- Remote Information RCP (RI_RCP)
- Defect Information RCP (DI_RCP)

The *receive and transmit RI_RCP* carries BDI/BEI/BIAE bits from the sink framers and the APS/PCC bytes. The *DI_DCP* transmits defects and alarms. RI_RCP is standard XFI running at 10.3125 Gbps and DI_RCP is standard SGMII (Serial Gigabit Media Independent Interfaces) running at 1.25 Gbps. See [ODU Ring Control Port Block \(ODU_RCP\)](#)

SERDES P/N signals can be swapped on a per lane basis. Independent configuration for P/N swap in the Tx and Rx direction is supported.

The frame format is described in [ODU Ring Control Port Block \(ODU_RCP\)](#) for both RI_RCP and DI_RCP.

The signals use M10 family SERDES from the Multimode SERDES at 10Gbps cell set. For details, see [1](#). Note also that the M10 SERDES are synchronous to the PCIE_REFCLK reference clock.

Note that the M10 SERDES does not provide the register configurability to swap the polarity of the Transmit P/N data and Receive P/N data signals. The Tx PCS for this interface does not have the ability to change the polarity of P/N, however the Rx PCS does have the capability to swap the polarity of P/N.

1.1 Revision History

Revision 4

Revision 4 was published in August 2017. The following is a summary of the changes in revision 4 of this document.

- Added "Table 22 Reference and Power Filtering Pin Description" to the pin description section. Refer to the hardware design guide for components and connections required for the power filtering pins.
- Added bootstrap option pins BEN, BST[1:0], CBT[2:0], MSE, MSM, MSR, NEN to "Table 3 DIGI-G5 Device Interface Pin Description".

- Changed software API names to reflect development 1.0.0 release of the DIGI-G5 Device Family Software Development Kit (SDK).
- Added test point receive and transmit pins to "Table 3 DIGI-G5 Device Interface Pin Description".

Revision 3

Revision 3 was published in February 2017. The following is a summary of the changes in revision 3 of this document.

- Increased number of SERDES on Bank C from 20 to 24.
- Indicated lane order reversal of SERDES Bank A on Device PCB Floor Planning Diagram.
- Added ODUjk mux 100G Capacity Resource tables for 600G and 500G modes of operation.
- Updated text and diagrams to show support for 24x10GE.

Revision 2

Revision 2 was published in January 2017. The following is a summary of the changes in revision 2 of this document.

- Removed references to PM6012 and PM6013.
- Removed support for SSPRQ, JP03A and JP03B SerDes patterns to align with standards.

Revision 1

Revision 1 was published in November 2016. The following is a summary of the changes in revision 1 of this document.

First release.

2 Titles

2.1 Index Entries in Titles

These need to be eliminated going forward, but the scripts have to be able to deal with existing ones gracefully.

2.2 Diffed TextNewDelete

The Non-Transparent Endpoint (NT EP) offers access to Switchtec's Non-Transparent Bridge (NTB) through mapping windows in the NT EP's Memory Space. It is presented to the RC as function 0 of the upstream port when the USP port mode is NT EP only, or as function 1 in the upstream port when the USP port mode supports transparent switching, as well. The following sections outline the details of the non-transparent endpoint.

Table 2-5 • Diffed Table TextNewDelete

A This is an appendix

A.1 Multi Topic Topic

The following sections describe the format of the IPC messages used to communicate with flash interface.0flash_interface_messages

FlashAddrFormat

Format of flash address used in flash interface IPC messages is not fixed and varies with flash geometry. The following table describes the flash address format.

Table A-17 • FlashAddrFormat

DWord	Position	Name	Description
0	6: 0	pageNum	Page Number Based on number of pages in a flash block, number of bits allocated for page number will change.
0	19: 7	blockNum	Block Number Based on number of blocks in a flash LUN, number of bits allocated for block number will change.
0	23: 20	lunNum	Lun Number Based on number of LUNs in a flash target, number of bits allocated for LUN number will change.
0	31: 24	reserved	Reserved

FlashChannelConfigUpdate

This message is sent to update flash channel configuration information.

Table A-18 • FlashChannelConfigUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> 1 (Read) Flash Read 2 (Write) Flash Write 3 (Erase) Flash Block Erase 4 (Continue) Flash Continuous Request 5 (FlashConfig) Flash Configuration update 6 (ReadParamPg) Flash Read Parameter Page 7 (ReadId) Flash Read Id 8 (SetFeature) Flash Set Feature 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.

DWord	Position	Name	Description
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	8: 4	numContext	Number of contexts Number of contexts per flash channel. The flash channel processor support 16 contexts allowing up to 16 flash logical units to perform read/program/erase operations in parallel.
4	12: 9	numLun	Number of LUNs Number of LUNs per CE.
4	18: 13	lunBitPosition	LUN Bit Position LUN bit position in flash address.
4	31: 19	reserved	Reserved
5	15: 0	pageSize	Page Size Flash page size including the spares in DWords
5	31: 16	reserved	Reserved
6	3: 0	_1stContext	First Context Number First context number in flash channel controller.

FlashEccContextInfoUpdate

This message is sent to update flash ECC context information such as ECC chunk size and protected data size. This message will be repeated until ECC context data is provided for all ECC contexts.

Table A-19 • FlashEccContextInfoUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (Read) Flash Read • 2 (Write) Flash Write • 3 (Erase) Flash Block Erase • 4 (Continue) Flash Continuous Request • 5 (FlashConfig) Flash Configuration update • 6 (ReadParamPg) Flash Read Parameter Page • 7 (ReadId) Flash Read Id • 8 (SetFeature) Flash Set Feature • 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue

DWord	Position	Name	Description
			This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	7: 4	numEntries	Number of ECC Context Data entries. This field indicates number of ECC context data entries are valid.
4	31: 8	reserved	Reserved
15:5	31: 0	eccContextData	ECC Context Data This field contain ECC context data such as context number, protected data size, and ECC chunk size.

EccContextData

Format of ECC context data used in FlashECCContextInfoUpdate message.

Table A-20 • EccContextData

DWord	Position	Name	Description
0	3: 0	eccContextNum	ECC Context Number
0	17: 4	eccChunkSize	ECC Chunk Size This field contains ECC chunk size in DWords for given ECC context number
0	31: 18	protectedDataSize	Protected Data Size. This field contains protected data size in DWords for given ECC context number.

FlashTimingParamUpdate

This message is sent to update flash timing parameters.

Table A-21 • FlashTimingParamUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (Read) Flash Read

DWord	Position	Name	Description
			<ul style="list-style-type: none"> • 2 (Write) Flash Write • 3 (Erase) Flash Block Erase • 4 (Continue) Flash Continuous Request • 5 (FlashConfig) Flash Configuration update • 6 (ReadParamPg) Flash Read Parameter Page • 7 (ReadId) Flash Read Id • 8 (SetFeature) Flash Set Feature • 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	4	timeSel	Timing Select This field selects the Flash Timing (FT) register used for the Flash operations. <ul style="list-style-type: none"> • 0 Timing mode 0 selects FT0xxx timing mode register values • 1 Timing mode 1 selects FT1xxx timing mode register values
4	31: 5	reserved	Reserved

DWord	Position	Name	Description
5	15: 0	dummyBusyTime	Dummy Busy Time This field specifies the dummy busy time (tDBSY) in units of Flash I/O clock cycles.
5	31: 16	clkHigh2RBLowTime	Clock High to R/B Low Time This field specifies the CLK high to R/B low (tWB) in units of Flash I/O clock cycles
6	31: 0	resetTime	Device Reset Time This field specifies the reset time (tRST) in units of Flash I/O clock cycles
7	31: 0	powerOnRstTime	Power on Reset Time This field specifies the Power on reset time (tPOR) in units of Flash I/O clock cycles
8	31: 0	interfaceChangeTime	Interface Change Time This field specifies the busy time to change interface (tITC) in units of Flash I/O clock cycles
15:9	31: 0	reserved	Reserved

FlashPowerCreditUpdate

This message is sent to update flash power credit for different commands. The current power credits are allocated based on the maximum power required for a particular command, in future this can be broken down to smaller granular if needed based on the flash state.

Table A-22 • FlashPowerCreditUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> 1 (Read) Flash Read 2 (Write) Flash Write 3 (Erase) Flash Block Erase 4 (Continue) Flash Continuous Request 5 (FlashConfig) Flash Configuration update 6 (ReadParamPg) Flash Read Parameter Page 7 (ReadId) Flash Read Id 8 (SetFeature) Flash Set Feature 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.

DWord	Position	Name	Description
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	31: 4	reserved	Reserved
5	15: 0	readPowerCredit	Read Power Credit This field specifies the Power units for the Read command, which includes the flash array read power and I/O burst read power.
5	31: 16	programPowerCredit	Program Power Credit This field specifies the Power units for the Program command, which includes the flash array program power and I/O burst read power.
6	15: 0	erasePowerCredit	Erase Power Credit This field specifies the Power units for the Erase command.
6	31: 16	miscPowerCredit	Miscellaneous Power Credit This specifies the maximum power used by any other commands like Read Status, Set feature, Get feature, etc
15:7	31: 0	reserved	Reserved

FlashDynamicUpdate

This message is sent to update flash parameters that can be changed at run time.

Table A-23 • FlashDynamicUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific.

DWord	Position	Name	Description
			<ul style="list-style-type: none"> 1 (Read) Flash Read 2 (Write) Flash Write 3 (Erase) Flash Block Erase 4 (Continue) Flash Continuous Request 5 (FlashConfig) Flash Configuration update 6 (ReadParamPg) Flash Read Parameter Page 7 (ReadId) Flash Read Id 8 (SetFeature) Flash Set Feature 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.

4	31: 4	reserved	Reserved
5	15: 0	highPriorPollLimit	High Priority Poll Limit This field specifies the poll limit for the high priority message processing.
5	31: 16	reserved	Reserved

DWord	Position	Name	Description
15:6	31: 0	reserved	Reserved

B This is an appendix

B.1 Multi Topic Topic

The following sections describe the format of the IPC messages used to communicate with flash interface.0flash_interface_messages

FlashAddrFormat

Format of flash address used in flash interface IPC messages is not fixed and varies with flash geometry. The following table describes the flash address format.

Table B-24 • FlashAddrFormat

DWord	Position	Name	Description
0	6: 0	pageNum	Page Number Based on number of pages in a flash block, number of bits allocated for page number will change.
0	19: 7	blockNum	Block Number Based on number of blocks in a flash LUN, number of bits allocated for block number will change.
0	23: 20	lunNum	Lun Number Based on number of LUNs in a flash target, number of bits allocated for LUN number will change.
0	31: 24	reserved	Reserved

FlashChannelConfigUpdate

This message is sent to update flash channel configuration information.

Table B-25 • FlashChannelConfigUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (Read) Flash Read • 2 (Write) Flash Write • 3 (Erase) Flash Block Erase • 4 (Continue) Flash Continuous Request • 5 (FlashConfig) Flash Configuration update • 6 (ReadParamPg) Flash Read Parameter Page • 7 (ReadId) Flash Read Id • 8 (SetFeature) Flash Set Feature • 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.

DWord	Position	Name	Description
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	8: 4	numContext	Number of contexts Number of contexts per flash channel. The flash channel processor support 16 contexts allowing up to 16 flash logical units to perform read/program/erase operations in parallel.
4	12: 9	numLun	Number of LUNs Number of LUNs per CE.
4	18: 13	lunBitPosition	LUN Bit Position LUN bit position in flash address.
4	31: 19	reserved	Reserved

15:5	31: 0	eccContextData	ECC Context Data This field contain ECC context data such as context number, protected data size, and ECC chunk size.

EccContextData

Format of ECC context data used in FlashECCContextInfoUpdate message.

Table B-27 • EccContextData

DWord	Position	Name	Description
0	3: 0	eccContextNum	ECC Context Number
0	17: 4	eccChunkSize	ECC Chunk Size This field contains ECC chunk size in DWords for given ECC context number
0	31: 18	protectedDataSize	Protected Data Size. This field contains protected data size in DWords for given ECC context number.

FlashTimingParamUpdate

This message is sent to update flash timing parameters.

Table B-28 • FlashTimingParamUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (Read) Flash Read

DWord	Position	Name	Description
			<ul style="list-style-type: none"> • 2 (Write) Flash Write • 3 (Erase) Flash Block Erase • 4 (Continue) Flash Continuous Request • 5 (FlashConfig) Flash Configuration update • 6 (ReadParamPg) Flash Read Parameter Page • 7 (ReadId) Flash Read Id • 8 (SetFeature) Flash Set Feature • 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	4	timeSel	Timing Select This field selects the Flash Timing (FT) register used for the Flash operations. <ul style="list-style-type: none"> • 0 Timing mode 0 selects FT0xxx timing mode register values • 1 Timing mode 1 selects FT1xxx timing mode register values
4	31: 5	reserved	Reserved

DWord	Position	Name	Description
5	15: 0	dummyBusyTime	Dummy Busy Time This field specifies the dummy busy time (tDBSY) in units of Flash I/O clock cycles.
5	31: 16	clkHigh2RBLowTime	Clock High to R/B Low Time This field specifies the CLK high to R/B low (tWB) in units of Flash I/O clock cycles
6	31: 0	resetTime	Device Reset Time This field specifies the reset time (tRST) in units of Flash I/O clock cycles
7	31: 0	powerOnRstTime	Power on Reset Time This field specifies the Power on reset time (tPOR) in units of Flash I/O clock cycles
8	31: 0	interfaceChangeTime	Interface Change Time This field specifies the busy time to change interface (tITC) in units of Flash I/O clock cycles
15:9	31: 0	reserved	Reserved

FlashPowerCreditUpdate

This message is sent to update flash power credit for different commands. The current power credits are allocated based on the maximum power required for a particular command, in future this can be broken down to smaller granular if needed based on the flash state.

Table B-29 • FlashPowerCreditUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific. <ul style="list-style-type: none"> 1 (Read) Flash Read 2 (Write) Flash Write 3 (Erase) Flash Block Erase 4 (Continue) Flash Continuous Request 5 (FlashConfig) Flash Configuration update 6 (ReadParamPg) Flash Read Parameter Page 7 (ReadId) Flash Read Id 8 (SetFeature) Flash Set Feature 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.

DWord	Position	Name	Description
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved
1	27: 24	outMsgQ	Outbound Message Queue This field specifies the index of Flash completion outbound message queue to be used by this message.
1	31: 28	reserved	Reserved
3:2	31: 0	tag	Tag This field contains opaque data that is passed from the request to the corresponding completion.
4	3: 0	subMsgType	Sub Message type This field encodes the request sub message type. The value of this field is microcode specific. <ul style="list-style-type: none"> • 1 (ChannelConfig) Flash Channel Configuration update • 2 (ECCContextInfo) Flash ECC Context information update • 3 (TimerParam) Flash Timing Parameter update • 4 (PowerCredit) Flash Power Credit update • 5 (Dynamic) Flash Dynamic Parameters update
4	31: 4	reserved	Reserved
5	15: 0	readPowerCredit	Read Power Credit This field specifies the Power units for the Read command, which includes the flash array read power and I/O burst read power.
5	31: 16	programPowerCredit	Program Power Credit This field specifies the Power units for the Program command, which includes the flash array program power and I/O burst read power.
6	15: 0	erasePowerCredit	Erase Power Credit This field specifies the Power units for the Erase command.
6	31: 16	miscPowerCredit	Miscellaneous Power Credit This specifies the maximum power used by any other commands like Read Status, Set feature, Get feature, etc
15:7	31: 0	reserved	Reserved

FlashDynamicUpdate

This message is sent to update flash parameters that can be changed at run time.

Table B-30 • FlashDynamicUpdate

DWord	Position	Name	Description
0	7: 0	msgType	Message type This field encodes the request message type. The value of this field is microcode specific.

DWord	Position	Name	Description
			<ul style="list-style-type: none"> 1 (Read) Flash Read 2 (Write) Flash Write 3 (Erase) Flash Block Erase 4 (Continue) Flash Continuous Request 5 (FlashConfig) Flash Configuration update 6 (ReadParamPg) Flash Read Parameter Page 7 (ReadId) Flash Read Id 8 (SetFeature) Flash Set Feature 9 (GetFeature) Flash Get Feature
0	11: 8	cntxt	Flash Channel Queue This field encodes the Flash channel queue associated with this message request.
0	16: 12	chan	Flash Channel This field encodes the Flash channel associated with this message request.
0	31: 17	reserved	Reserved
1	1: 0	reserved	Reserved
1	18: 2	chMsgNodeAddr	Chained Message Node Address This field contains the node address of the next request message in the message chain. A value of zero in this field indicates that this is the last message of a message chain.
1	19	chain	Chained Message When this bit is set, the request message is part of a chained message and is not the last message in the message chain. The address of the next request message in the message chain is specified by the chMsgNodeAddr field.
1	23: 20	reserved	Reserved

4	31: 4	reserved	Reserved
5	15: 0	highPriorPollLimit	High Priority Poll Limit This field specifies the poll limit for the high priority message processing.
5	31: 16	reserved	Reserved

DWord	Position	Name	Description
15:6	31: 0	reserved	Reserved

C The Microchip Web Site

Microchip provides online support via our web site at <http://www.microchip.com/>. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

D Customer Change Notification Service

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at <http://www.microchip.com/>. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

E Customer Support

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://www.microchip.com/support>

F Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

G Legal Notice

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

H Trademarks

The Microchip name and logo, the Microchip logo, AnyRate, AVR, AVR logo, AVR Freaks, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, Helder, JukeBlox, KeeLoq, Klear, LANCheck, LINK MD, maXStylus, maXTouch, MediaLB, megaAVR, MOST, MOST logo, MPLAB, OptoLyzer, PIC, picoPower, PICSTART, PIC32 logo, Prochip Designer, QTouch, SAM-BA, SpyNIC, SST, SST Logo, SuperFlash, tinyAVR, UNI/O, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

ClockWorks, The Embedded Control Solutions Company, EtherSynch, Hyper Speed Control, HyperLight Load, IntelliMOS, mTouch, Precision Edge, and Quiet-Wire are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, EtherGREEN, In-Circuit Serial Programming, ICSP, INICnet, Inter-Chip Connectivity, JitterBlocker, KlearNet, KlearNet logo, memBrain, Mindi, MiWi, motorBench, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, SAM-ICE, Serial Quad I/O, SMART-I.S., SQL, SuperSwitcher, SuperSwitcher II, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

Silicon Storage Technology is a registered trademark of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.

I Quality Management System Certified by DNV

ISO/TS 16949

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC[®] MCUs and dsPIC[®] DSCs, KEELOQ[®] code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
